

It's Time For Your Annual Treatment

Insect activity will be high in 2017

As you know, it is very important to provide a yearly full facility treatment for protection, sanitation and maintaining happy employees, tenants and customers. *This service enhances your regular on-going service program.* We feel most of our customers would benefit from one or more of the following services. Please check which option(s) you would be interested in and we'll call or email you back a quote.

OPTION 1

INTENSIVE INTERIOR FULL COMPLEX CLEANOUT

This procedure will allow us to do a complete service to the "ENTIRE" building. This treatment has no odor or residue. We treat for ants, drain flies, waterbugs, sowbugs, silverfish, spiders, crickets, cockroaches, centipedes, millipedes, rats and mice throughout the entire interior of your building(s). This service is especially important for apartment buildings with cockroach or rodent problems.

OPTION 2

FULL EXTERIOR COMPLEX GROUND SPRAY TREATMENT

We will spray the grounds using power equipment and safe biodegradable chemicals. This barrier treatment will help prevent the migration of crawling pests such as *carpenter ants, spiders, earwigs, boxelder bugs and clovermites*. This is a seasonal outside service throughout the perimeter of your building. We will spray 5 feet onto the building and 5 feet away from the building. We will use truck-mounted units with 250 lb. of pressurized, safe and effective products. This service is fully guaranteed for the season for clover mites, earwigs and boxelder bugs. This service will greatly reduce pillbugs, millipedes, centipedes, ants and spiders from migrating into your building. To obtain effective coverage, our thorough spraying will probably cause some windows to become spotted with chemicals. This can readily be washed off, but you should be advised not to undertake window cleaning programs prior to our treatment.

OPTION 3

FULL EXTERIOR COMPLEX WASP AND HORNET POWER SPRAY TREATMENT

Our program consists of chemical applications to shutters, eaves, ledges, soffit, fascia, gutters, trees, bushes, etc. Using power equipment, our crew would treat these vulnerable exterior areas to eliminate current nests and prevent new nesting for the entire season. To obtain effective coverage, our thorough spraying will probably cause some windows to become spotted with the products. This can readily be washed off, but you should be advised not to undertake window cleaning programs prior to our treatment. This treatment is fully guaranteed for the entire season.

OPTION 4

MOSQUITO TREATMENT

All appointments are scheduled at a time that is convenient for you. We will treat all areas of vegetation prone to mosquitoes throughout the property line. Aerex technicians understand the habits of mosquitos and use that knowledge when developing a mosquito control program that is best suited to your property and your particular mosquito problem. Our technicians are professional, state certified, licensed applicators. Each treatment will be approximately 25-35 days apart or earlier if requested by the customer. Any additional treatments needed between services will be done at no charge.

OPTION 5

**DISCOUNT FOR ANY COMBINED TREATMENT
(JUST CHECK OFF WHAT YOU WANT)**
